September 2025: imaging, massage therapy, pain management, physical therapy	4	$1,260.46
October 2025: imaging	1	$473.81

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck pain, restricted cervical range of motion, and muscle tension. The reported mechanism of injury is conssitent with the nature and force of the impact. Over the course of 17 visits, care consisted of conservative management including manual therapy, therapeutic exercise, and home stretching instructions. Treatment followed a typical and expected progression, with visit frequency reduced as symptoms steadily improved and range of motion returned toward normal. Imaging and physical examination findings clearly corroborate the diagnosis of cervical strain. The patient reports no konwn prior injury or treatment involving the cervical spine. Billed services reflect the treatment rendered, with no repeated or duplicate charges identified. Patient was discharged to self-directed home exercise with instructions to return if symptoms recur.
