May 2025: imaging, massage therapy, pain management, physical therapy	6	$1,723.12
June 2025: massage therapy, pain management	2	$591.85

Treatment summary

Patient presented following a collision that occurred while the patient was turning left and was struck from the side. The reported mechanism is consistent with the force involved, and the resulting wrist fracture is a typical injury for this type of impact. Imaging and physical examination findings clearly confirm the fracture, and the clinical picture supports the account given at intake. The patient also reports a minor wrist strain in the distant past that resolved completely with no lasting limitation and did not affect the present evaluation. Care was delivered over 25 visits, following a usual and expected course. Treatment intensity tapered steadily as healing progressed and function improved. Billing records reflect single, non-duplicative charges for each service rendered. Ongoing follow-up is recommended to monitor range of motion and grip strength, with return to full activity anticipated as recovery continues.
