August 2023: chiropractic adjustment, imaging, massage therapy, physical therapy	5	$1,264.21
September 2023: chiropractic adjustment, imaging, massage therapy, physical therapy	4	$870.83

Treatment summary

Patient presented following a sideswipe collision that occurred while the other vehicle moved into their lane during a lane change. Complaints centered on the right knee, with pain, swelling, and reduced range of motion reported from the outset. The mechanism described is consistent with the knee injury being evaluated, and the patient has no known prior injury to this body region. Examination revealed some findings that support a meniscal or ligamentous problem, while other orthopedic and neurovascular tests returned within normal limits. Care was delivered over 25 visits, which ran somewhat longer than typical for this type of injury, consisting of physical therapy, activity modification, and home exercise instruction. Billed services reflect single, appropriate charges for each encounter with no duplicate entries. Based on current status, the patient is improving gradually, and further evaluation will be considered if symptoms persist.
