November 2023: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	12	$4,326.01
December 2023: chiropractic adjustment, pain management	2	$813.84

Treatment summary

Patient presented following a low-speed head-on motor vehicle collision with complaints of neck pain, stiffness, and headache consistent with whiplash-type cervical injury. The mechanism of injury is well matched to the reported symptoms. Over the cuorse of care the patient attended 21 visits, which is somewhat longer than typically expected for this type of injury, with treatment including manual therapy, supervised therapeutic exercise, and home exercise instruction. Cervical range of moiton was restricted on initial examination, with paraspinal muscle tenderness and reduced strength noted. Imaging and clinical examination findings clearly confirm the presence of soft tissue injury to the cervical spine. The patient reports no prior injury or treatment involving the neck or upper back. Billing records reflect single entries for each service rendered, with no duplicate or repeated charges identified. Current status shows gardual improvement in pain and mobility, and the patient has been discharged to a self-directed home program with follow-up as needed.
