July 2023: chiropractic adjustment, pain management, physical therapy	5	$2,151.04
August 2023: chiropractic adjustment, imaging, pain management, physical therapy	4	$1,905.32

Treatment summary

Patient presented following a low-speed head-on collision with a wrist fracture. The reported mechanism is consistent with the type and force of the injury sustained. Initial imaging and reduction were completed, and the patient was placed in immobilization with follow-up scheduled as is standard for this fracture pattern. Over the course of 16 visits, treatment ran somewhat longer than is typical for an injury of this kind, with progressive rehabilitation including range-of-motion exercises, grip strengthening, and monitoring of healing. Several examination findings, including tenderness over the fracture site and reduced grip strength, support the diagnosis, while other neurovascular and sensory testing returned within normal limits. No prior injury to the same area is known from the patient history. Billing records were reviewed and show no duplicate or repeated charges for the same services. Ongoing care is directed toward full functional recovery, with a plan for reassessment at the next scheduled visit.
