September 2023: chiropractic adjustment, imaging, physical therapy	4	$1,409.02
October 2023: imaging, pain management, physical therapy	5	$2,688.69
November 2023: chiropractic adjustment, imaging, physical therapy	4	$901.84

Treatment summary

Patient presented following a side-impact collision at an intersection with complaints of neck pain, stiffness, and limited range of motion. The reported mechanism of injury is consistent with the force and direction of the crash, and the clinical picture aligns well with a cervical strain. Over the course of 21 visits, care proceeded along a conventional path, combining manual therapy, targeted stretching, and graduated strengthening. Visit frequency decreased steadily as symptoms improved and function returned. Imaging and physical examination findings clearly confirm the soft tissue injury to the cervical region. No prior injury or treatment involving the same body area is known to this provider. Billing records reflect single, appropriate charges for each service rendered, with no duplicated entries. At discharge the patient reported near-resolution of symptoms and was released to full activity with a home exercise program.
