Treatment History and Summary

Patient:	Eric Garcia
Treating provider:	Ruben Clark, DC
Diagnosis:	knee injury

Treatment history by month

Month and services	Visits	Charges
September 2024: evaluation, pain management	2	$759.13
October 2024: chiropractic adjustment, imaging	5	$2,848.03
November 2024: chiropractic adjustment, pain management	3	$1,233.00

Treatment summary

Patient presented following a low-speed collision in a parking lot, reporting pain and swelling in the right knee. The mechanism of injury is consistent with the reported force of impact and the location of symptoms. Over the course of ten visits, care progressed through a conservative plan including physical examination, targeted therapeutic exercise, and activity modification. Teratment followed a typical trajectory, with visit frequency reduced as pain and range of motion improved. Examination revealed effusion and tenderness along the joint line that support the reported injury, while ligamentous stability testing and neurovascular assessment were within normal limits. The patient mentioned a minor strain to the same knee several years ago, which had resolved completely without lasting limitation. A billing review identified one service recorded twice on the same date; the provider acknowledged the second entry was a duplicate and it has been noted for correction. Patient is expected to return to baseline function with continued home exercise.
