Treating provider:	Clifford Reyes, DC
Diagnosis:	wrist fracture

Treatment history by month

Month and services	Visits	Charges
April 2023: chiropractic adjustment, evaluation, imaging, physical therapy	5	$1,230.01
May 2023: pain management	1	$343.66

Treatment summary

Patient presented following a motor vehicle collision in which the patient's vehicle was struck from the side while the patient was turning left. The mechanism and force of impact are consistent with the reported distal radius injury. Radiographs and examination findings support a wrist fracture, with localized tenderness and reduced grip strength on the affected side, while neurovascular testing and the remaining range-of-motion checks were within normal limits. Over six visits, care followed a standard course of immobilization, pain management, and progressive therapy exercises. Visit frequency decreased as symptoms improved and function returned. The record also notes prior treatment to the same body region within the past two years, and that earlier condition contributes to some of the current complaints. Billed services correspond to the visits documented, with no repeated charges identified. Patient is expected to continue home exercises and return for reassessment if symptoms change.
