June 2025: chiropractic adjustment, imaging, pain management	7	$4,232.01
July 2025: massage therapy	1	$116.86

Treatment summary

Patient presented following a low-speed collision in a parking lot with complaints of neck and low back pain and stiffness. Over the course of 16 visits, care consisted of conservative management including manual therapy, stretching and strengthening exercises, and modalities for pain control. Reported symptoms are consistent with the mechanism and force of the impact described. Examination revealed paraspinal muscle tenderness and reduced range of motion in the cervical and lumbar regions, while neurological screening, reflexes, and strength testing were within normal limits. No prior injury or treatment to the neck or back is known. Treatment progressed in a typical fashion, with visit frequency decreasing as symptoms improved. Billing records reflect single charges for each service rendered without duplication. The patient is improving and is expected to reach maximum benefit with a home exercise program.
