Month and services	Visits	Charges
July 2024: evaluation, imaging	2	$1,512.76
August 2024: imaging, massage therapy, pain management	5	$3,275.58
September 2024: chiropractic adjustment	1	$100.10

Treatment summary

The patient presented after a parking lot collision with a reported fracture of the wrist. The mechanism of injury described is consistent with the reported fracture. Over eight visits, care followed a typical course and was tapered as the patient improved. Some examination findings support the presence of a wrist injury, while other tests were within normal limits. Review of the records sohws long-standing treatment for the same region before the collision, and much of the current symptom burden appears to relate to that earlier condition rather than to the recent event. Two similar charges recorded on the same day are under review for accuracy. Ongonig follow-up will focus on functional recovery of the wrist, and the relative contribution of the prior condition will be considered when assessing remaining limitations.
