Treating provider:	Kenneth Potter, DC
Diagnosis:	neck and back strain

Treatment history by month

Month and services	Visits	Charges
September 2023: evaluation, imaging, pain management, physical therapy	5	$2,279.45
October 2023: chiropractic adjustment, imaging, massage therapy, pain management, physical therapy	11	$8,654.08
November 2023: imaging, massage therapy	2	$1,050.52

Treatment summary

Patient presented following a side-impact motor vehicle collision at an intersection, complaining of neck and low back pain with associated stiffness and muscle tension. The reported mechanism and force of the collision are consistent with the soft tissue injuries described. No prior injury to the cervical or lumbar regions is known from history or records. Eighteen visits were completed over the course of care, which is somewhat longer than typically expected for uncomplicated cervical and lumbar strain, and treatment included manual therapy, targeted exercise, and modalities for symptom control. Cervical and lumbar imaging showed no acute fracture, malalignment, or structural abnormality, and neurological and orthopedic examination findings were within normal limits. Diagnoses are based largely on the patient's self-reported pain and funcitonal limitations, as objective findings were limited. Billed services reflect the treatment rendered, with no duplicate charges identified. Patient is advised to continue home exercise and to return if symptoms worsen or fail to improve with ongoing self-management.
