Treatment History and Summary

Patient:	Matthew Reed
Treating provider:	Clifford Reyes, DC
Diagnosis:	neck and back strain

Treatment history by month

Month and services	Visits	Charges
April 2025: chiropractic adjustment, evaluation, imaging, massage therapy, pain management, physica	15	$3,605.46
May 2025: imaging, massage therapy, pain management, physical therapy	5	$2,921.12

Treatment summary

Patient presented following a sideswipe collision that occurred while the pateint was changing lanes. Complaints centered on neck and low back pain with associated muscle spasm and reduced range of motion. Mechanism of injury is consistent with the reported crash, and the presenting symptoms are a plausible result of that force. Physical examination and imaging findings clearly confirm soft tissue injury to the cervical and lumbar regions. No prior injury to these body areas is known from the patient's history or available records.

Care consisted of 20 visits including manual therapy, a home stretching and strengthening program, and anti-inflammatory medicatoin as needed. Treatment followed a usual and expected course, with frequency tapering as the patient's pain and mobility improved. Billing records reflect single entries for each service with no repeated charges for the same procedure on the same date.

At the most recent visit the patient reported substantial improvement, with near-normal range of motion and minimal residual discomfort. Dischrage from active care is recommended, with a home exercise program to be continued independently.
